

ASSIGNMENT 1

Assignment Date	24 September 2022
Student Name	Ms. Karolin Preethy X
Student Roll Number	952819104017
Maximum Marks	2 Marks
Team ID	PNT2022TMID50561

1. Write a python program to test a given number is prime or not

Program

```
n=int(input("enter the number"))
```

```
if n > 1:
```

```
for i in range(2, n):
```

```
if (n % i) == 0:
```

```
print(n, "is not a prime number")
```

```
break
```

```
else:
```

```
print(n, "is a prime number")
```

```
else:
```

```
print(n, "is not a prime number")
```

OUTPUT:

The screenshot shows the Spyder Python IDE interface. The left pane displays a Python script named 'prime.py' with the following code:

```
1 n=int(input("enter the number"))
2 if n > 1:
3     for i in range(2, n):
4         if (n % i) == 0:
5             print(n, "is not a prime number")
6             break
7     else:
8         print(n, "is a prime number")
9 else:
10    print(n, "is not a prime number")
11
```

The right pane shows the 'Console' tab with the following output:

```
In [18]: runfile('C:/Users/Aravind/Documents/python programs/prime.py', wdir='C:/Users/Aravind/Documents/python programs')
enter the number45
45 is not a prime number

In [19]: runfile('C:/Users/Aravind/Documents/python programs/prime.py', wdir='C:/Users/Aravind/Documents/python programs')
enter the number43
43 is a prime number

In [20]:
```

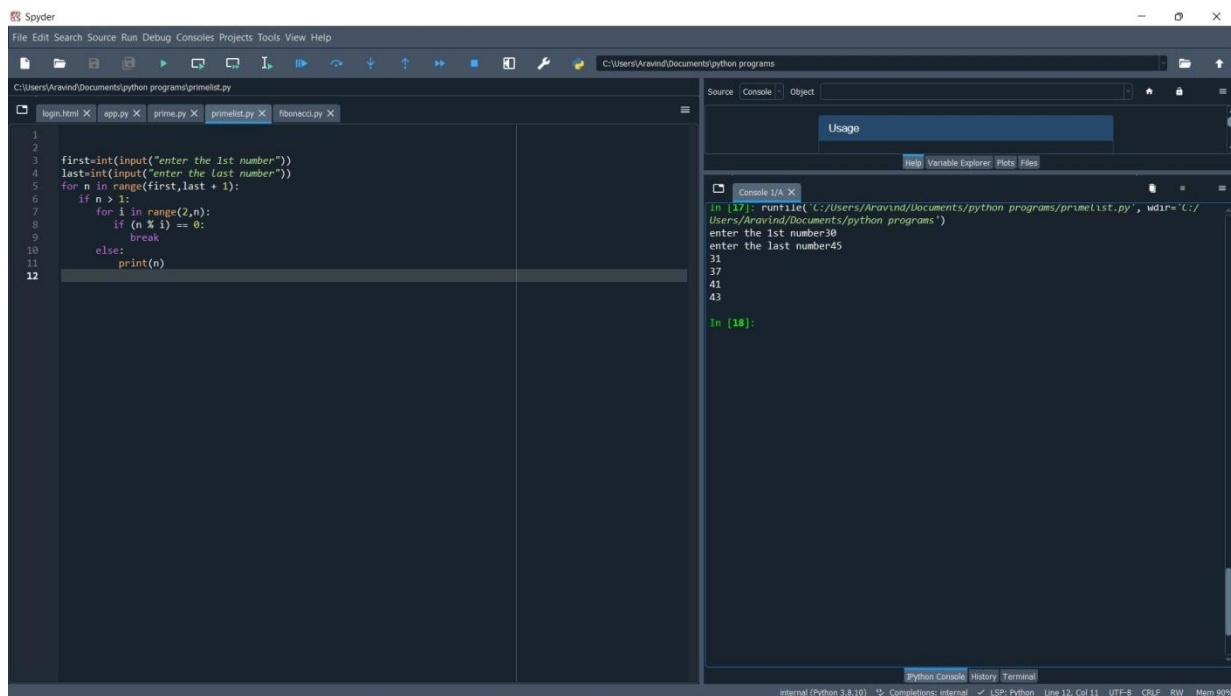

The status bar at the bottom indicates 'Internal (Python 3.8.10)' and 'Line 11, Col 7'.

3. Write a python program to display prime number series up to given number

Program:

```
first=int(input("enter the 1st number"))
last=int(input("enter the last number"))
for n in range(first,last + 1):
    if n > 1:
        for i in range(2,n):
            if (n % i) == 0:
                break
            else:
                print(n)
```

OUTPUT:

4. Write a python program to generate fibonacci series

Program:

```
n = int(input("How many times ? "))
a1, a2 = 0, 1
count = 0
```

```

if n <= 0:
print("Please enter a positive integer")
elif n == 1:
print("Fibonacci sequence upto",n,":")
print(a1)
else:
print("Fibonacci sequence:")
while count < n:
print(a1)
a = a1 + a2
a1 = a2
a2 = a
count += 1

```

OUTPUT:

The screenshot shows the Spyder Python IDE interface. The left pane displays the source code for a file named 'fibonacci.py'. The code prompts the user for the number of times to generate the sequence, checks for positive integers, and uses a while loop to print the Fibonacci sequence. The right pane shows the console output, which includes the prompt 'How many times ? 15' and the resulting Fibonacci sequence: 0, 1, 1, 2, 3, 5, 8, 13, 21, 34, 55, 89, 144, 233, 377.

```

1 n = int(input("How many times ? "))
2 a1, a2 = 0, 1
3 count = 0
4 if n <= 0:
5     print("Please enter a positive integer")
6 elif n == 1:
7     print("Fibonacci sequence upto",n,":")
8     print(a1)
9 else:
10    print("Fibonacci sequence:")
11    while count < n:
12        print(a1)
13        a = a1 + a2
14        a1 = a2
15        a2 = a
16    count += 1

```

Console 1/A X

```

17711
28657
46368

In [16]: runfile('C:/Users/Aravind/Documents/python programs/fibonacci.py', wdir='C:/Users/Aravind/Documents/python programs')
How many times ? 15
Fibonacci sequence:
0
1
1
2
3
5
8
13
21
34
55
89
144
233
377

In [17]:

```

4. Write a program to generate odd numbers from m to n using while loop.

Program:

```
m=int(input("enter the 1st number"))
```

```
n=int(input("enter the last number"))
```

```
p=m
```

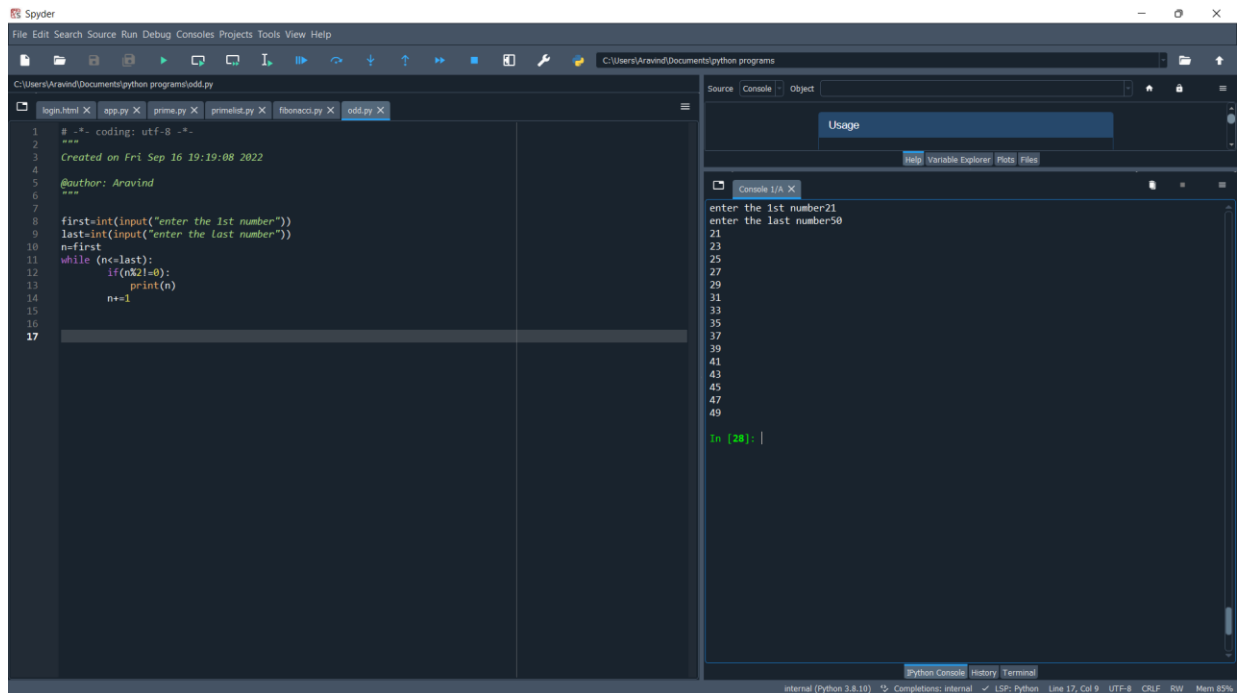

```
while (p<=n):
```

```
    if(n%2!=0):
```

```
        print(n)
```

```
    p+=1
```

OUTPUT:

The screenshot shows the Spyder Python IDE interface. The main editor window displays a Python script named 'odd.py' with the following code:

```
1  # -*- coding: utf-8 -*-
2  """
3  Created on Fri Sep 16 19:08 2022
4
5  @author: Aravind
6  """
7
8  first=int(input("enter the 1st number"))
9  last=int(input("enter the last number"))
10 n=first
11 while (n<=last):
12     if(n%2!=0):
13         print(n)
14     n+=1
15
16
17
```

The right-hand pane shows the 'Console' tab with the following output:

```
enter the 1st number:21
enter the last number:50
21
23
25
27
29
31
33
35
37
39
41
43
45
47
49
In [20]:
```

The status bar at the bottom indicates 'internal (Python 3.8.10)' and 'Mem: 85%'.
